

# Cell and Gene Therapy (CAGT)

Providing industry-leading science and innovative laboratory solutions across the cell and gene therapy spectrum

# Expert services to stay ahead of advancing science

The use of alternative treatments such as Cell and Gene Therapies (CAGT) holds great potential for bridging the gaps left by traditional treatments. These innovative CAGT clinical development programs require a suite of complex laboratory assessments to satisfy regulatory submissions and support Proof of Mechanism, Pharmacodynamic, Safety and Efficacy investigations. IQVIA Laboratories, with its global laboratory network and industry leading subject matter experts, is ideally positioned to shape, validate, and deliver those biomarker assessments. In partnership with **IQVIA** and **IQVIA** Biotech, IQVIA Laboratories can provide flexible, integrated Cell and Gene Therapy development solutions throughout the drug development journey, beginning with the pre-clinical phase and continuing through post-approval.

### Industry-leading technology and expertise with a global footprint

#### **Genomics technology**

We quickly design and validate potential therapeutics and can accommodate early safety testing with specialized assays, including ddPCR, Next Generation Sequencing and single-cell portfolio.

#### Thought leadership

We offer not only laboratory testing but also expertise in the design, validation, and choosing the correct assay for your specific need.

#### **Global assays**

We develop customized assays in our North Carolina laboratory and transfer them seamlessly to Beijing and other laboratories around the world.

## "IQVIA Laboratories offers an extensive array of CAGT laboratory solutions to meet the unique demands of CAGT clinical development."

		Gene-modified Cell Therapy (e.g., CAR-T, CAR-NK, TCR-T)	Gene Therapy	
Diagnostics, IP charcterization and identification of therapy targets	Patient selection		<ul> <li>Presence of anti-AAV total and nAbs (titers)</li> <li>High resolution HLA</li> </ul>	
	Immuno- phenotyification	Flow cytometry		
	Therapy target ID	<ul> <li>Target assessment in tissues: qPCR/ IHC</li> <li>Immune cell profiling (surface markers)</li> </ul>		
Safety	Biodistribution	CAR transgene: qPCR / ddPCR	• Transgene: qPCR / ddPCR	
	Presence and persistence	<ul> <li>Chimeric Receptor detection: qPCR / ddPCR</li> <li>CAR-T tracking (enumeration):         Flow cytometry</li> <li>Replication-comp virus detection:         qPCR/ddPCCR</li> <li>Integration site analysis: PCR/ NGS</li> </ul>	<ul> <li>Vector genome: qPCR / ddPCR</li> <li>TG mRNA: qPCR</li> <li>T Protein: WB/ IHC/ ELISA/ LBA/ LC-MS</li> <li>Intergration site analysis: PCR / NGS</li> <li>Replication-comp virus detection: qPCR / ddPCR</li> </ul>	
	Clearance		Viral shedding: qPCR / ddPCR	
	Immunogenicity	Anti-chimeric receptor Abs & ELISpot	<ul> <li>Anti-vector / TG nAs or total Abs (ADA)</li> <li>Anti-vector / TG T cell responses (ELISpot)</li> </ul>	
Efficacy	Pharmacodynamics	<ul> <li>Cytokine Profiling: single and multiplex ELISA, NGS</li> <li>Genomics: Tumor mutation load (Bespoke)</li> <li>T cell: Expansion and persistence (TCR sequencing, immune landscape signature</li> </ul>		
	Exploratory	<ul> <li>High resolution HLA, Tumor profiling NGS, RNA sequencing, whole exome sequencing</li> <li>Single-Cell RNA sequencing, Immune cell profiling, Spatial genomics</li> <li>CAR-T tumor infiltration</li> <li>Cell depletion (B cell): Flow cytometry</li> <li>Soluble targets (e.g., SBCMA)</li> </ul>

# Cell therapy

		<u></u>		
CELL THERAPY TESTING LOCATION GUIDANCE CAP/CLIA/GCP vs GLP/BioA	INDICATION	VALIDATION LEVEL REQUIRED	TESTING LOCATION	OFF THE SHELF SOLUTIONS
Total antibodies	Inclusion/exclusion	CAP CLIA	Central lab	
Neutralizing antibodies	Inclusion/exclusion	CAP	Central lab	
Total antibodies	Immunogenicity (testing after screening)	FDA/ EMA ADA	BioA lab	
Neutralizing antibodies	Immunogenicity (testing after screening)	FDA/ EMA ADA	BioA lab	
Vector testing (molecular)	Biodistribution or vector shedding	EX FFP	Central lab, Genomics, Nexelis laval	Lentiviral VCN Assay using PSI (HIV-1) by ddPCR (blood) — targets vector backbone
Vector testing (molecular)	Replication competency	EX FFP	Central lab, Genomics, Nexelis laval	Replication competent lentivirus (VSV-G) quantiation by ddPCR (blood)  Replication competent retrovirus (GALV) quantitation by ddPCR (blood)
Vector testing (molecular)	Integration testing	EX FFP	Central lab, Genomics	
Transgene (soluble protien)	Pharmacokinetics, Pharmacodynamics, or Immunogenicity	ICH FDA FDA/ BMV FDA/ ADA	BioA lab	
Transgene (molecular)	RNA expression	EX FFP	Central lab, Genomics	
Transgene (tissue expression)	IHC/Western blot	EX FFP	Central lab AP/ TSAIL	
Cytokines	Safety/ pharmacodynamics	EX FFP	Central lab/RBM/ BioA	RBM, BioA and the CL have hundreds of assays available
Elispot	T-cell immune response	EX	Nexelis or CTL	
Flow cytometry	PD immunophenotyping	EX	Central lab	Numerous off the shelf and bespoke

# Gene therapy

GENE THERAPY TESTING LOCATION GUIDANCE CAP/CLIA/GCP vs GLP/BioA	INDICATION	VALIDATION LEVEL REQUIRED	TESTING LOCATION	OFF THE SHELF SOLUTIONS
Total antibodies	Inclusion/exclusion	CAP	Central lab	Total AAV9 is available at Athena
Neutralizing antibodies	Inclusion/exclusion	CAP CLIA	Central lab	
Total antibodies	Immunogenicity (testing after screening)	FDA/ EMA ADA	BioA lab
