

Transforming Clinical Laboratory Operations with Site-Centric eRequisition

Reimagining the eRequisition

IQVIA Laboratories is transforming clinical laboratory operations with an innovative, site-centric eRequisition system. Investigator sites often struggle with the complexity and rigidity of current systems. IQVIA Laboratories is changing this paradigm by putting investigator sites at the forefront to deliver a purpose-built eRequisition solution that provides a seamless experience and addresses the unique challenges sites commonly encounter.

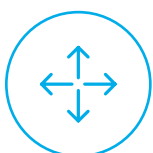

Intuitive navigation: Designed for ease of use, requiring minimal training and ensuring rapid adoption.

Real-time data validation: Reduces errors and queries, improving data accuracy and accelerating results.

Comprehensive access: Fully optimized for desktop, tablet and mobile devices, enabling work anytime, anywhere.

Flexible functionality: Provides guided use of kits across different visits and allows for the replacement of expired tubes, supporting sustainable site processes and minimizing wastage.

Dynamic sample management: Guides users through collection, processing and shipping, ensuring compliance at every step.

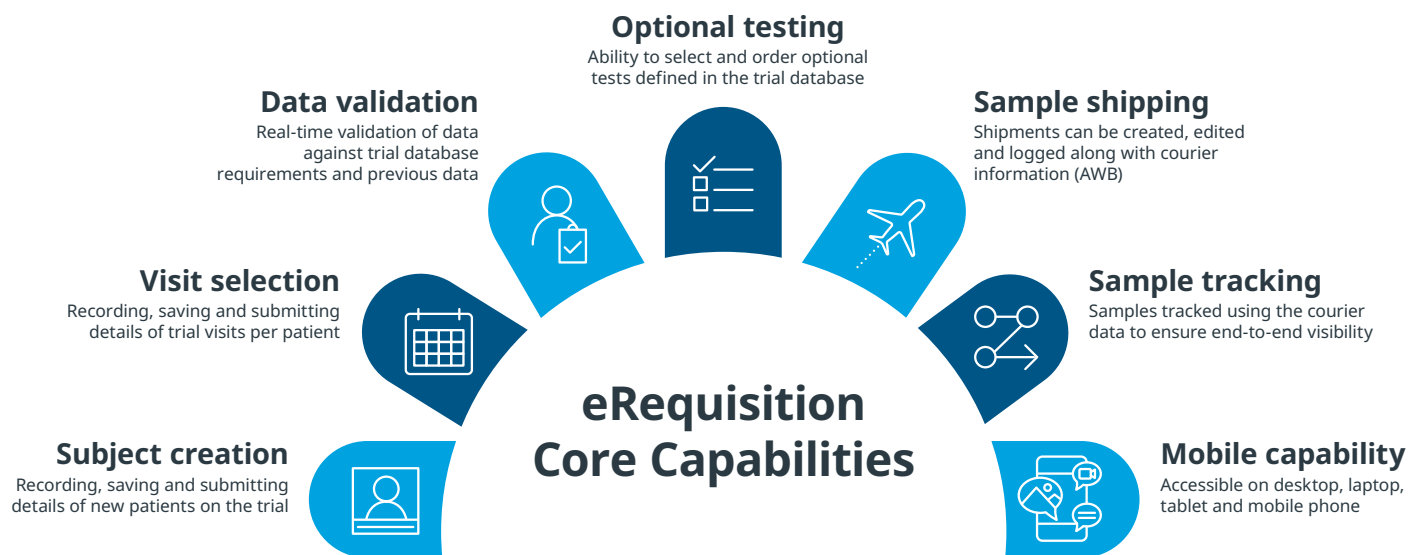

Streamlined processes, smarter outcomes

With robust digital workflows, IQVIA Laboratories' eRequisition system delivers clean, actionable data faster while reducing the operational burden on site staff. This forward-thinking approach helps transform how sites manage patient visits and trial requirements, fostering a smarter and more reliable system.

Elevating efficiency through advanced features

IQVIA Laboratories' eRequisition provides an unmatched digital platform designed to support investigator sites in delivering high-quality data.

Enhancing site operations with practical tools

Designed to address the real needs of investigator sites, eRequisition offers practical, user-centric solutions:

- **Flexible kit management:** Adapts to expired or alternate kits, preventing disruptions and ensuring smooth operations.
- **Step-by-step guidance:** Supports site staff through every stage of sample collection and shipping with intuitive instructions.
- **Diverse scanning options:** Allows barcode scanning, webcam use and manual entry to accommodate varied workflows.
- **Streamlined processes:** Minimizes disruptions while maintaining high standards for data accuracy and integrity.

FUTURE INNOVATIONS ON THE HORIZON

While eRequisition is built to excel today, exciting enhancements are on the way to further amplify its impact:

- **Anatomic pathology support:** Expanding capabilities to include tissue handling requirements.
- **Direct third-party shipments:** Streamlining sample tracking to external labs.
- **Storage visibility:** Allowing sites to manage sample inventories with ease.
- **Post-submission editing:** Enabling updates to subject and visit data for better trial management.
